

Lamp Signal 220V 22mm Voltage/Current Display

Model:AD16-22DVA

Description:

The AD16-22DVA current-voltage dual-display indicator uses LED light-emitting chip as the light source. It is suitable for signal voltage indication, warning signal, accident signal and other indications in the lines of power, telecommunications, machine tools, ships, textiles, printing, mining machinery and other equipment. The AD16-22DVA current-voltage dual-display indicator lampshade is made of high-strength polycarbonate. Has revolutionized the current voltage display function and replaced the current meter and signal indicator. Long life, low energy consumption, small size, light weight, good impact resistance, built-in screw connection, the terminal is safer and more convenient.

Specifications:

- ◆ Measuring the voltage and current of industrial power on the same screen.
- ◆ Measurement Range: AC 20-380V
- ◆ Current Specification: 0-100A
- ◆ Display Type: Digital
- ◆ Mounting Hole: 22mm
- ◆ Measurement Accuracy: Level 1
- ◆ Screen Color: Green

Installation Size:
